<u>IN THE CLAIMS</u>

Kindly amend claims 1-3 and 6-8 as shown in the following claim listing:

1. (currently amended) Method of controlling an ambient light, the method comprising:

receiving main <u>program</u> data and additional data by a receiver;

setting a property of the ambient light based upon the additional data<u>;</u>
~~characterized in that~~

~~the additional data comprises~~ <u>including</u> descriptive information about the main <u>program</u> data <u>in the additional data;</u> ~~and the method comprises~~

filtering ~~this~~ <u>the</u> descriptive information from the additional data<u>;</u> and

setting the property of the ambient light based upon the descriptive information <u>to enhance perception of the main program data</u>.

2. (currently amended) Method of controlling an ambient light according to claim 1, the method comprising presenting the main <u>program</u> data by a presentation device and setting the property of the ambient light that is in proximity of the presentation device.

3. (currently amended) Method of controlling an ambient light according to claim 2, wherein setting the property of the ambient light is substantially synchronously with presenting the main <u>program</u> data by the presentation device.

4. (original)   Method of controlling an ambient light according to claim 1, wherein setting the property of the ambient light is configurable.

5.(original)   Method of controlling an ambient light according to claim 1, wherein setting the property of the ambient light is configurable by a user preference.

6.(currently amended) System of controlling an ambient light, the system comprising:
        receiving means ~~conceived~~ to receive main <u>program</u> data and additional data;
        setting means ~~conceived~~ to set a property of the ambient light based upon the additional data<u>,</u>
characterized in that<u>:</u>
        the additional data comprises descriptive information about the main <u>program</u> data and the system comprises<u>:</u>
        filtering means ~~conceived~~ to filter this descriptive information from the additional data<u>;</u> and ~~the~~
        setting means ~~are conceived~~ to set the property of the ambient light based upon the descriptive information <u>to enhance perception of the main program data</u>.

7.(currently amended) System of controlling an ambient light according to claim 6, the system comprising presenting means ~~conceived~~ to present the main <u>program</u> data on a presentation device and ~~the~~ setting means ~~are conceived~~ to set the property of the ambient light that is in proximity of the presentation device.

8.(currently amended) System of controlling an ambient light according to claim 7, the system comprising synchronization means ~~conceived~~ to synchronize the presenting means with the setting means.

9.(original)   Lighting unit comprising a light armature and the system according to claim 6.
